

Clinical and Systems Transformation Project Update: July 25, 2013

Zynx Health Demos Now On-Line

We held demonstrations of the ZynxOrders software on Tuesday July 16th. If you missed it, we recorded a session for online viewing. The video can be viewed [here](#).

As noted in last week's bulletin, our health organizations have aligned with Zynx Health to bring up-to-date evidence-informed decision making support to clinicians at the point of care. We will not simply adopt the evidence provided but will have clinicians review the content for use in our clinical settings.

Zynx Health also provides customizable templates and online collaboration tools that can expedite the time from order set and care plan development to use in the clinical environment.

The demos were meant to be a brief introduction to just one of the tools that CST will use to support the workflow design and system build of a solution that supports safe, quality care in our organizations.

Cerner Demos

Demonstrations on the functionality of Cerner were held two weeks ago. Attendees had the chance to see the software that will enable our clinical and systems transformation in operation.

If you would like to view a recording of one of these demos, [click here](#).

Please note: Some viewers had trouble listening to these videos without headphones; this was deemed to be an issue with users who had older computers. The issue has been resolved and users should be able to hear just as well with or without headphones.

Questions and comments regarding the Clinical and Systems Transformation Project can be emailed to your health organization's Clinical Transformation Lead or Chief Medical Information Officer
